

Mobile Model Detection Script

This Mobile Model Detection script gives you an easy-to-use script to call the user's mobile phone/tablet handset/brand on your landing page. Showing information about visitor handset will increase the conversion rate and CTR of the landing page.

Step 1: Add this code just before the `</head>` tag:

```
<script type="text/javascript" src="//wurfl.io/wurfl.js"></script>
```

Note: If you already added this code to you page once, you don not have to add it again.

Step 2: Add the following line where you want to see the mobile detection info on your page

```
<script type="text/javascript">if(WURFL.is_mobile){document.write(WURFL.complete_device_name);}</script>
```

Note: You can insert this into a SPAN/DIV tag and use CSS to style it
